

Dr Clock

by Anna Gaffney

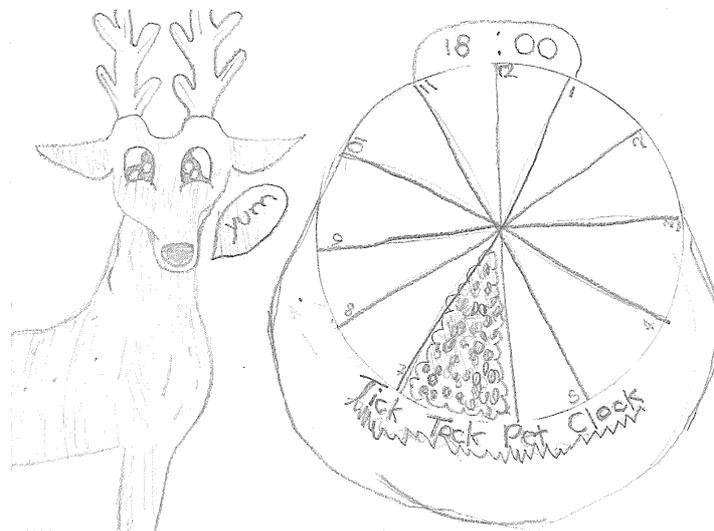

My name is Dr Clock I am 300 years old and I am from Paris. I love working with clocks and animals; I have five pets of my own.

A childhood memory of mine would be of my parents who were a clockmaker and a vet. My father's name was Izzy and my mother's name was Anna. Their occupations started my interests for clocks and pets. When I was growing up we had a pet Gorilla, Tiger, Giraffe, Elephant and a Chameleon. I walk with a tick tock and my body moves up and down. I speak seven languages including English, Spanish, Irish, French, German, Chinese and Mandarin. I live in a clock shaped house in Paris next to veterinary clinic. People like me because of my inventions including the Tick tock pet clock. Another reason people like me is because I let them come in and see my clock shaped house and pat my pets for free.

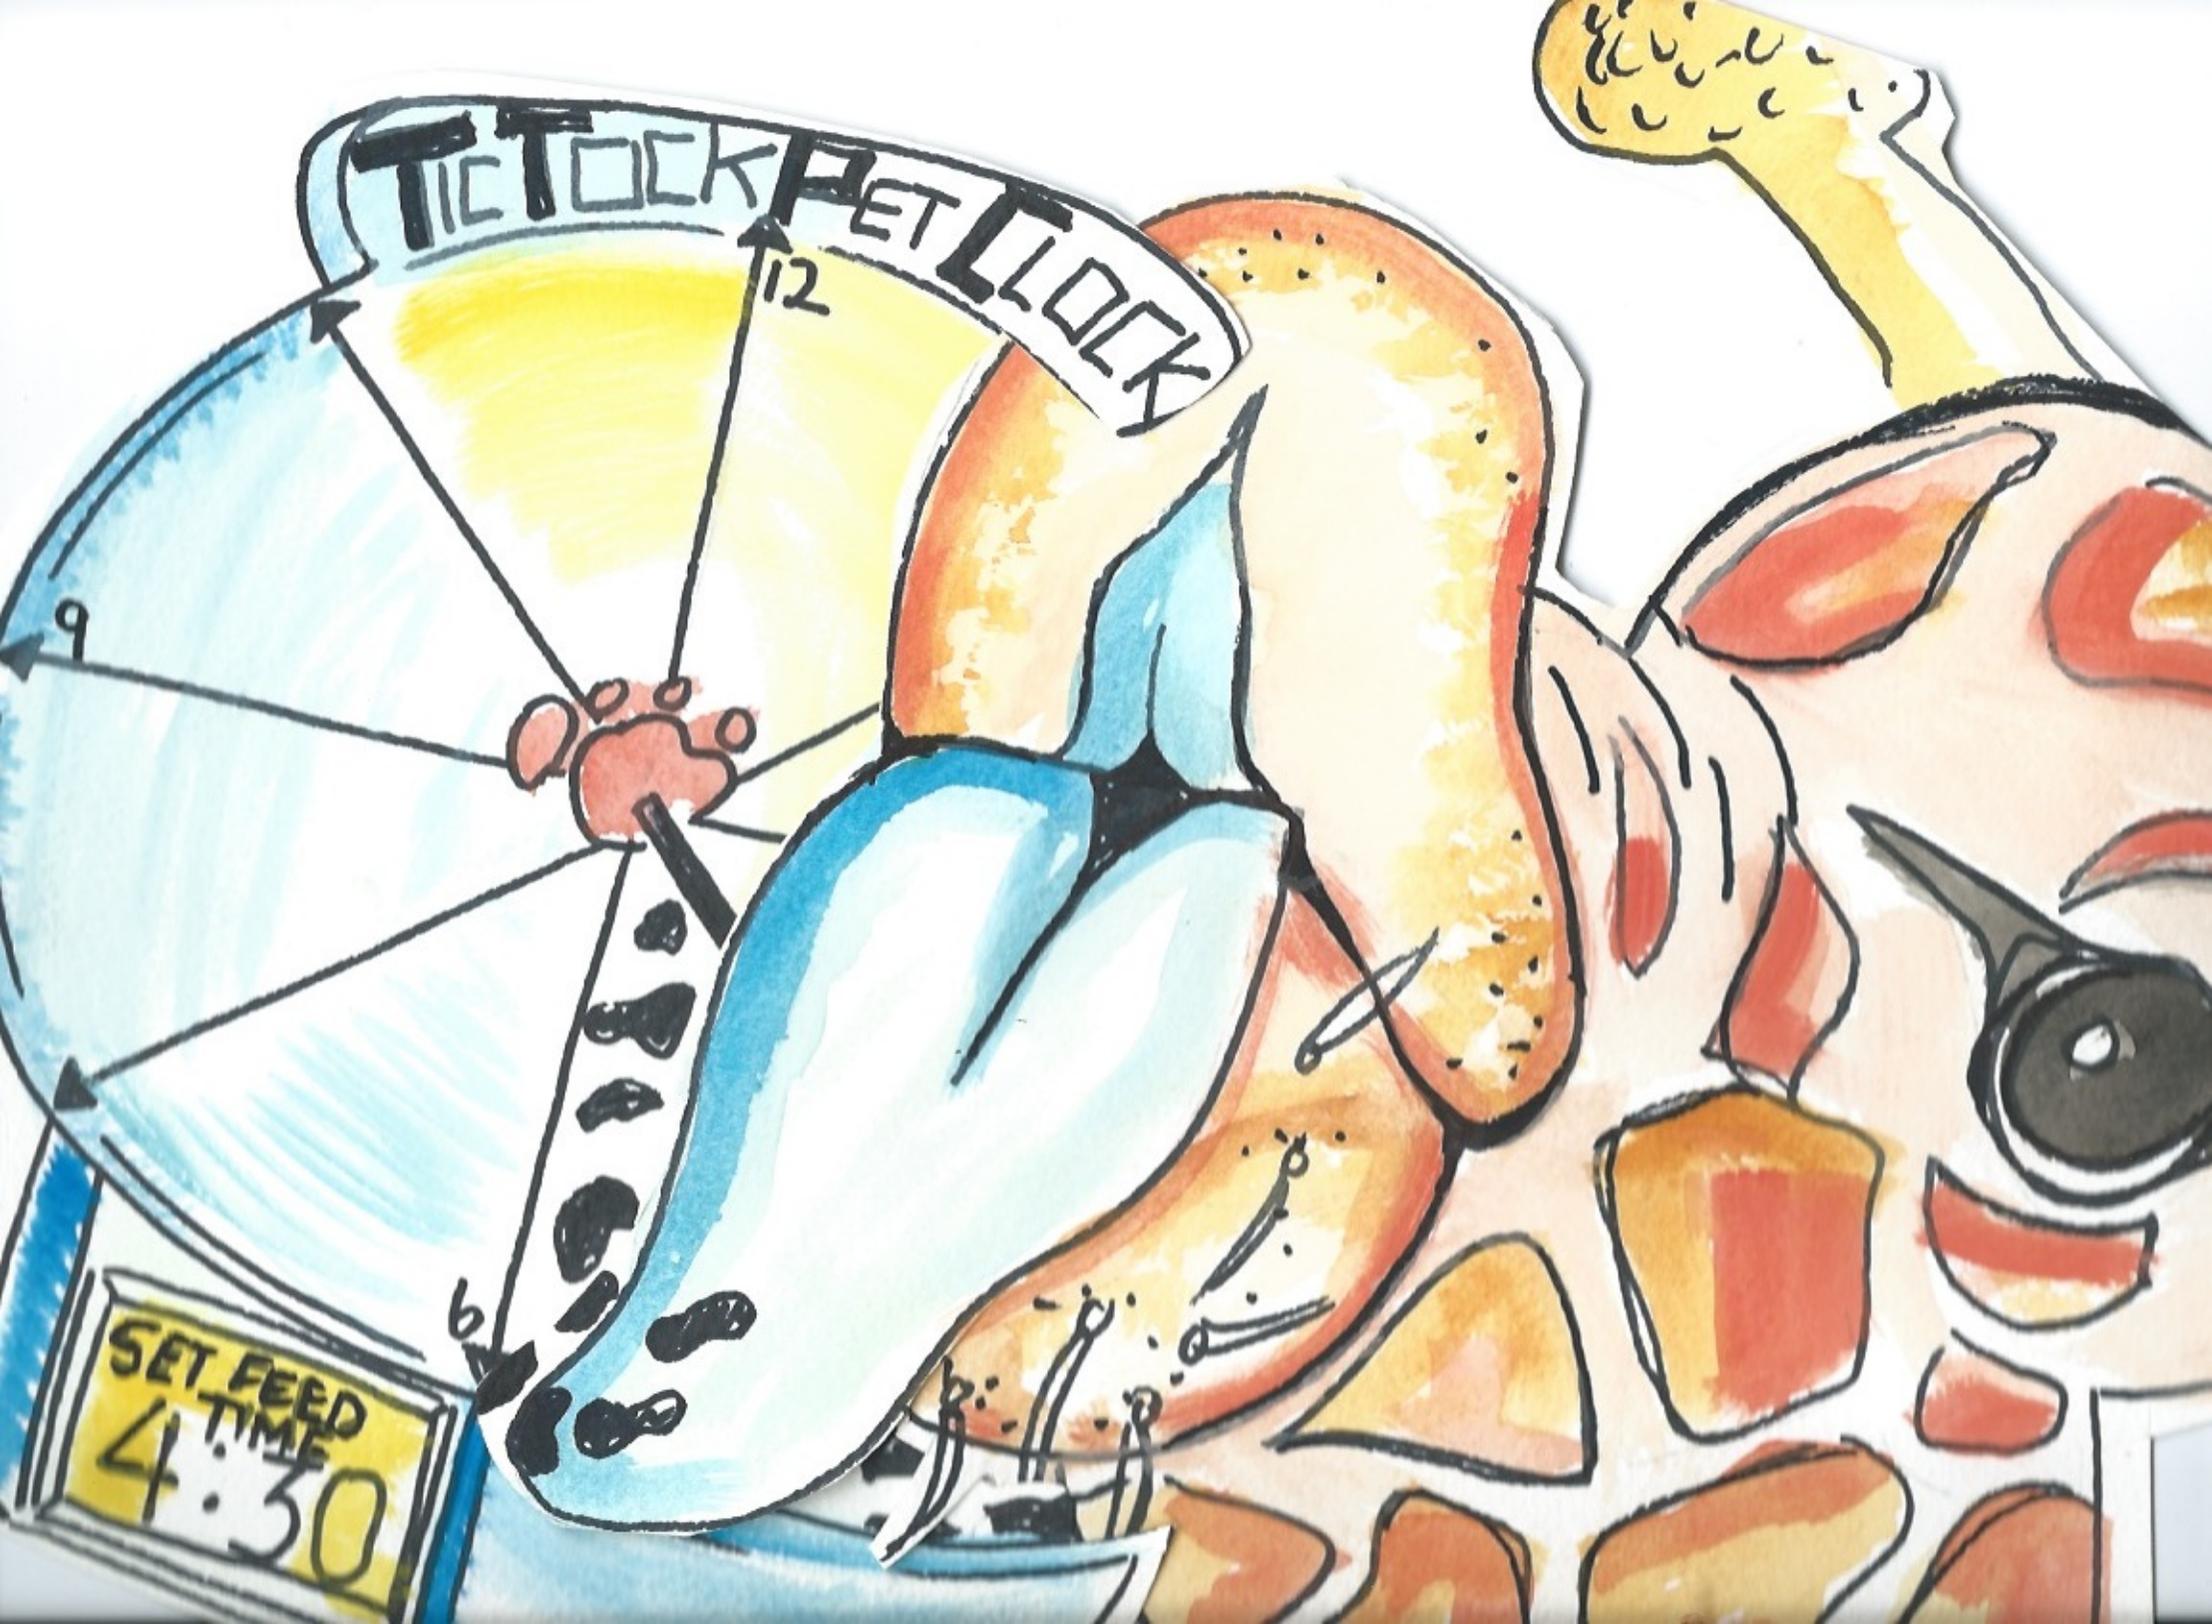

Tick Tock Pet Clock

My invention is called the 'Tick Tock Pet Clock'. I got the idea from a night when I forgot to feed my neighbours cats when they were away. All my ideas come from deep inside my brain as well as the many, many years of studying clocks

and pets. The reason my invention will change the world is because pets will not die of

starvation when their owners go on holidays. The world needs to know that I will revolutionise pet food through this invention. (I own 300 clocks!)
