### **The Depth Ball**

It's so that when kids or younger children get in the ocean they know how far they are allowed in.

It looks like a yellow ball, if it's red it means its deep, and when it's orange it's in the middle, and when it's green it means it's shallow.

This invention will help children stay safe.

### **Invention Pitch**

My name is Bridget. My invention will be great as it will save kids from drowning or getting in trouble in the water. All you need to do is throw it in the water and it will measure the depth and let children know if it is safe to swim.
